## RESEARCH INTERESTS

My research interests lie in the general area of artificial intelligence, particularly in deep learning, security and privacy, applications in computer vision and internet of things. More concretely, My research interests focus on human-object interaction (HOI) recognition and backdoor adversarial attack of DNNs.

## RESEARCH/PROJECT EXPERIENCE

### Machine Vision and Intelligence Group, Department of Computer Science, SJTU

Undergraduate Research Assistant

Sept 2017 - Present

- Proposed [Transferable Interactiveness Network](#) to tackle the imbalanced distribution in human action recognition problems, especially human-object interaction detection problems
- Designed method that outperforms the previous state-of-the-art methods by 2.38, 3.06, and 2.17 mAP on three Default category sets on HICO-DET, 4.0 and 3.4 mAP on V-COCO
- Built the state-of-the-art dataset of human-object interaction **HAKE** (<http://hake-mvig.cn/>). HAKE provides elaborate and abundant with 7 M+ fine-grained part level annotations in a large scale of images and videos. In supervised, few-shot and transfer learning, our approach achieves significant improvements on large-scale activity benchmarks
- One [paper](#) has been accepted in CVPR2019, one paper has been accepted in CVPR2020, one [paper](#) on arxiv (co-author)

### Networked Embedded Systems Laboratory, Department of Electrical Computer Engineering, UCLA

Undergraduate Research Assistant to Professor Mani Srivastava, ACM&IEEE Fellow

June 2019 - Present

- Designed an algorithm to detect Trojan backdoor in deep neural networks (i.e., whether a neural network has been compromised by malware that causes the model to produce incorrect results when the input includes special triggers.)
- Proposed a detection framework called **NeuronInspect**, using visual interpretability technique to effectively detect Trojan backdoors in deep neural networks without restoring the trigger and any backdoor samples
- Evaluate **NeuronInspect** on different attack scenarios and prove better robustness and effectiveness over previous state-of-the-art trojan backdoor detection techniques by a great margin
- One paper in submission (first-author)

### Biometric Group, Department of Instrument Engineering, SJTU

Undergraduate Research Assistant

Feb 2019 - Present

- Designed an end-to-end Generative Adversarial Network to denoise and enhance latent fingerprint images. Using multi-scale generators and discriminators to maintain both global and local features of the fingerprint
- Proposed a loss function for GAN considering the correctness of orientation, fingerprint quality, and minutiae preservation.
- Optimized the fingerprint segmentation, feature extraction and recognition algorithm based on enhanced results. Achieved state-of-the-art matching accuracy on NIST SD27 dataset
- One paper in submission (first-author)
